DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1- 4 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Bolsworth et al (5,393,116).

In Figures 1-3 and 5, Bolsworth discloses a seat proper 4, a pivotally mounted back 8, a rigid plate or backing plate 32 connecting the seat proper and back, a control mechanism 56, and a spring-biased control piece 52,70 pivoted about pin 48. The control piece has an S-shaped guide slot 66 including a peg 68, a middle portion and two lateral branches 86,88 for catching the peg in a locked position. The arcuate middle portion is centered on the first axis 64. Furthermore, the two ends extend radially relative to the first axis in opposite directions from the middle portion. Moreover, the distances between each lateral branch to the first axis are relatively identical.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3636

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bolsworth et al (5,393,116) in view of Hiram et al (JP 59034940 A).

Bolsworth discloses the control piece, however, the guide member that co-operates with the guide surface is absent. Note Bolsworth does provide the design of one of the notches in Figure 2 on both plates 50 and 56. Hiram does teach of a guide member 20 co-operating with a guide surface, specifically with first notch 10a in Figure 5. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the guide member and first notch, as taught by Hiram, on Bolsworth's multi-positional seat for an additional locking member on the outer periphery for better securement purposes.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Robinson and Krasinski both feature elements of the claimed invention.
